

## D02 Counter Drone Equipment

### Description

This is a directional jamming device: by transmitting the same frequency electromagnetic wave signal to interfere with the communication link of the drone, forcing the drone to lose the image transmission signal and remote control signal, so as to achieve the purpose of driving away and forced landing.

### Features

- Directional transmission jamming signal, with rotating disk use
- Maximum jamming distance of 3000 meters
- 360° all-round defense
- It is coupled with the detector to automatically counter the Uas

### Application

- Border defense
- Camp protection
- Large-scale security activity
- Key security area
- Farm guard
- Private club

### Specification

| Parameter               | Parameter values  |
|-------------------------|---|
| Product model           | DQL-02  |
| Jamming type            | Directional jamming   |
| Jamming mode            | Drive away and forced landing                                     |
| Working frequency       | 400MHz, 900MHz, 1.2GHz, 1.5GHz,<br>2.4GHz, 3.3GHz, 5.2GHz, 5.8GHz |
| Jamming range           | 3000m   |
| Horizontal angle        | 360°  |
| Vertical angle          | 60°   |
| Rotation speed          | 0.05°/s to 60°/s  |
| Power supply            | AC 220V   |
| Total power             | ≤800W   |
| Communication interface | RJ45  |
| Protection level        | IP66  |
| Working temprature      | -30°C to 65°C   |
| Host dimension          | ≤470mm×400mm×700mm  |
| Host weight             | ≤45Kg   |
